

CAMPUS PLANNING

Vast Data Center

This large campus in West Jordan provided a nice canvas to apply water conserving and functional design. There are two large patios on the sides of the building that act as extensions of the conference rooms. Many site elements were carefully chosen to match the design of the interior and exterior materials. To create spaces for patrons, we added water features, fire pits, seating areas, and walking trails. This project qualified for Silver LEED and for the largest grant given by Jordan Valley Water Conservancy District to date.
